

HACKYEAH 2026 · SUPERTeam POLAND

Kitty

The group kitty, **minus the treasurer.**

Savings, 0% loans and direct debits for groups –
enforced by a Solana program, not by people.

FINANCE WITHOUT INTERMEDIARIES

SOLANA DEVNET

THE PROBLEM

Pooling money works only through someone you **have to trust**.

Coworkers, schools, friends and families already save together and lend to each other at 0%. It runs on a treasurer who holds the money, a board that approves loans and a payroll that deducts installments.

61,000 zł

of colleagues' savings taken by a workplace fund treasurer and lost on a crypto exchange.

Puls Legnicy · March 2024

261,510 zł

of withdrawals hidden by a fund cashier with falsified reports, for ten years.

Court of Appeal in Katowice · II AKa 98/15

THE IDEA

Replace every intermediary **with a rule** nobody can change.

The money sits in an account owned by a program. The rules are public code with no admin key – not for the founder, not for us.

100%

of every loan covered by locked savings

0

people who approve a loan

0

clicks to pay an installment on time

A shared fund anyone can open, join and check.

Funds
Where did the middleman go?

A shared fund with no treasurer and no bank

For groups that already pool money together: coworkers, schools, friends, families. No treasurer or bank holds the money – only a program whose rules nobody can change: not the founder, and not us, the authors.

1.

Save together

Everyone pays into a shared fund. You take out your free money whenever you want.

2.

Borrow interest-free

You can borrow several times what you have saved. Nobody approves it – others just need to guarantee it for you.

+ Create a fund

You set the rules once and after that nobody can change them, not even you. The founder is an ordinary member.

Fund name

IT Team Fund

Your name in the fund

Anna

How much you can borrow

2× your savings

Installment frequency

Demo (every minute)

Live demo: an installment every minute, 15 s grace period, up to 6 installments.

Save together. Borrow with guarantors. **Let installments pay themselves.**

01

Save

Members pay into the program's vault. A standing contribution can be pulled every period.

02

Borrow

Up to a multiple of your savings. Your free savings lock first; co-members pledge the rest.

03

Get paid

Once locked savings cover 100% of the loan, it pays out. Nobody approves it.

04

Repay

On the due date the installment leaves the wallet under a revocable SPL allowance.

NO PAYROLL, NO BANK

The installment leaves the wallet **by itself**.

The borrower approves a capped allowance once. On the due date a bot with no special rights sends the pull; the program takes only what is due. Revoke it, and the locked savings pay instead.

$$\text{vault} = \Sigma \text{savings} - \Sigma \text{lent}$$

Every loan is fully covered before it pays out. A missed installment is taken from locked savings – the borrower's first, then the guarantors'. So every member's free money is always in the vault, ready to withdraw.

🔒 THE FUND'S MONEY

2,750 PLN

= saved 2,750 PLN – lent 0 PLN ✓

It sits in a program account, not with a treasurer or a bank. Every loan is fully covered by locked savings, so every member's free money is always here – you take it out whenever you want, without asking anyone.

check the fund's account in the explorer [↗](#)

🛡️ THIS FUND'S RULES

How much you can borrow	up to 2× what you have saved
Payout condition	your savings + others' guarantees cover the full amount
Installments	up to 6, every 1 min
Grace period	15 s
Interest and fees	0 PLN
Who approves loans	nobody

WHERE THE MIDDLEMAN DISAPPEARS

Every intermediary becomes a rule.

TODAY

A treasurer holds the money

A board or a bank approves the loan

Payroll or a bank collects installments

Debt collectors chase defaulters

A credit bureau scores the borrower

The board can change the rules

IN KITTY

A program-owned vault; only the rules move money out

Nobody approves – it pays out when collateral covers 100%

A revocable allowance; the program takes only what is due

After grace, anyone can cover the installment from collateral

Every repayment record is public on the chain

No instruction changes them, and there is no admin key

IT WORKS

Live on Solana devnet, backed by tests.

Every claim in this deck is a test you can run or a transaction you can open in the explorer.

20_{/20}

Rust tests on LiteSVM with the real SPL Token program

18_{/18}

web tests: the app's math matches the program

E2E

a devnet run ending in a bank run – vault back to 0

Bot

pulls installments on Railway, with no special rights

No one holds the money.
